Composite-Pools

TWIN „S“ XTRA

A premium-quality ready-made pool:

The pool body is engineered with fiberglass reinforced plastic and an insulated floor constructed from rigid foam polyurethane with GFRP coating, while the walls and the supporting edge for the pool cover contain steel reinforcements.

The five carefully designed shaped steps on each side of the pool allow users to enter and exit easily, safely, and comfortably.

The beach zone and the seating area between the stairs offer many opportunities to relax in different water depths.

On the opposite front side, a seating step or a roller shutter shaft Integra 2-13 can be installed as an option.

Colour & Light

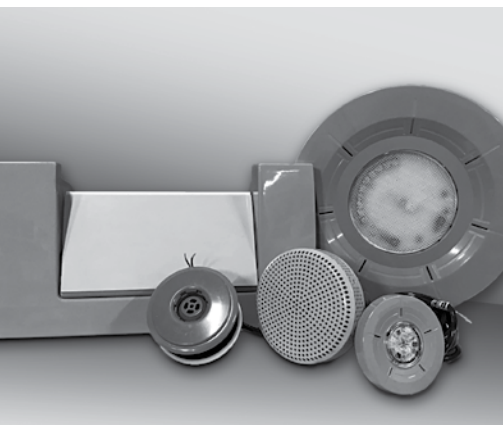

We believe your pool should be an extraordinary experience for both your body and eyes – both night and day. Our pool comes standard with a wide array of visually stunning coloured LED lights designed to complement your every mood. The delicate light gray colour of the pool creates the perfect backdrop for the magnificent lightshow of your choosing. The light gray colour allows the crystal-clear water to sparkle in a delicate and serene fresh, natural blue tone. Complementary dark gray cover creates a seamless visual that is stunning to look at. With the optional granite coping stone and the roller-shutter to complete the look, your pool will be as delightful to look at as it is to relax in.

The Xtra colour lighting concept ensures unforgettable evening hours at your pool. With two brilliant LED spotlights positioned next to the inlet nozzles distributing dazzling colour throughout the water, as well as a powerful main floodlight that illuminates the entire pool, you can easily create a swimming experience that is tailor-made to your mood. Using the remote control, you can change the colours, intensity, and sequence of the pool – creating your own unique light spectacle.

Lounge & Relax

Extra seating and lounging areas round out your pool experience, with several different zones that offer unique and varying levels of relaxation and comfort. The first step is the Beach Zone, a shallow and calming water experience that allows you to lounge and relax.

The second step is the Massage Step, utilizing the powerful underwater nozzles to deliver incredible foot and back massages while reclining soothing water that is 50 cm deep.

Salt & Easy

Xtra - Durable plastic materials allow the use of saline electrolysis for water disinfection as standard. This makes it easier to maintain the pool and water.

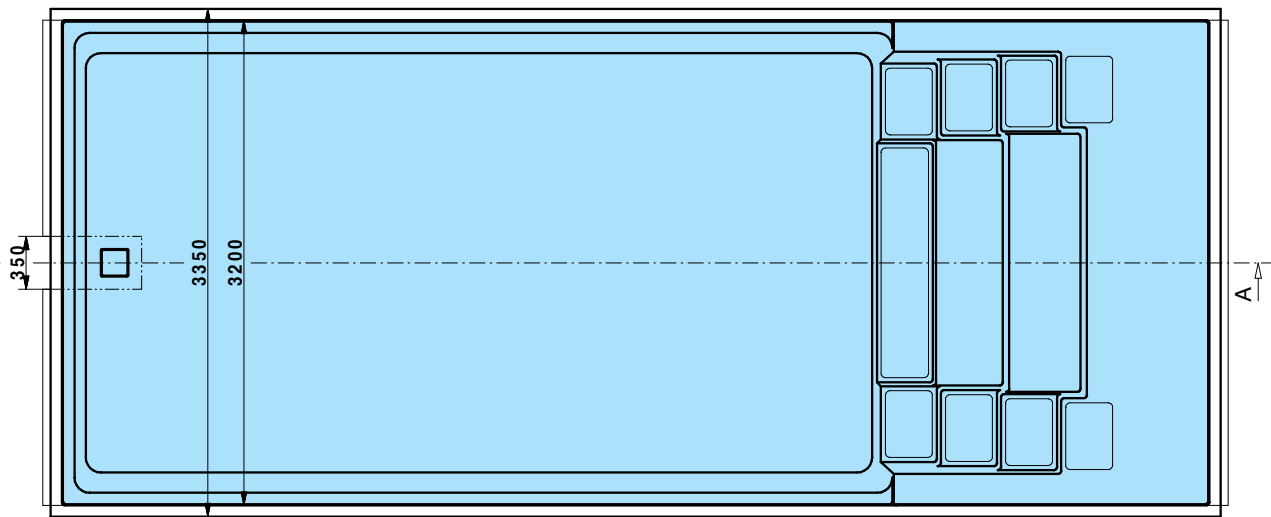

Clean & Safe

The optional Xtra pool cover is located opposite the stairs. The support edge for the swimming pool cover runs on the left and right side below the water level and ensures safety when the roller shutter is loaded due to the contact surface. A folding bench seat is mounted above the optional roller shutter shaft. The roller shutter cover ensures that careless bathers cannot take the wrong step into the pool.

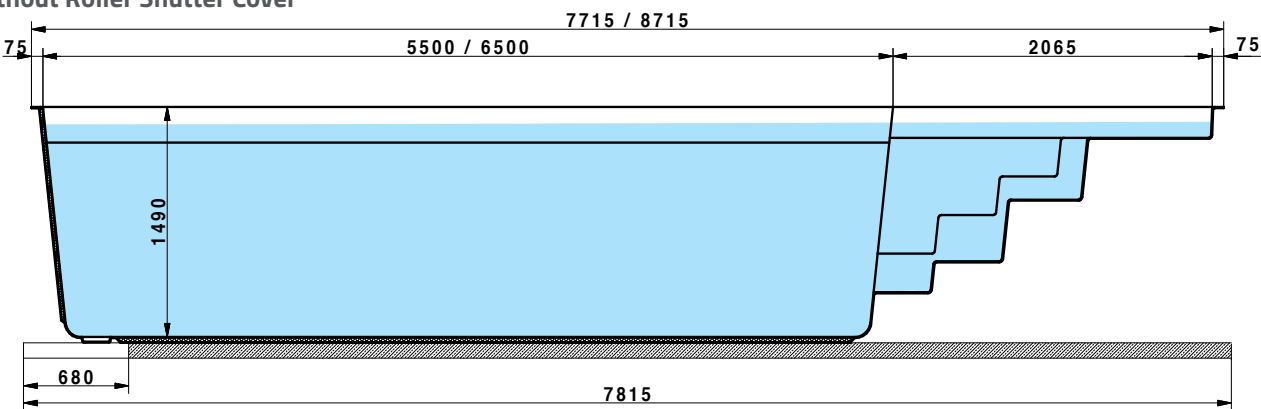

Technique and installation

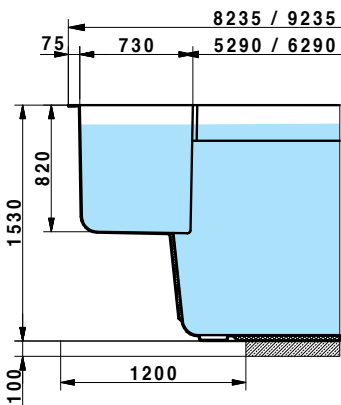

Technical Drawing Xtra

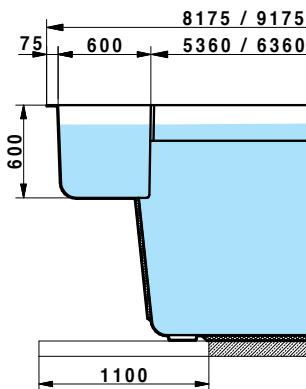

Without Roller Shutter Cover

With Integra 2-13

With Seating Bench

Excavation

Length/width:

At least 25 cm larger all round than the external dimensions of the pool.

Depth:

Construction height of the pool body
 + At least 10 cm for the concrete slab
 + Any necessary drainage layer
 – Amount that the pool is to protrude
 out of the ground.

①

②

④

External construction height: 154 cm

A recess 50 x 50 cm is to be provided for exterior skimmers.

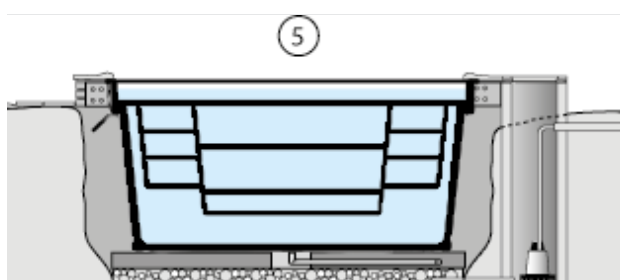

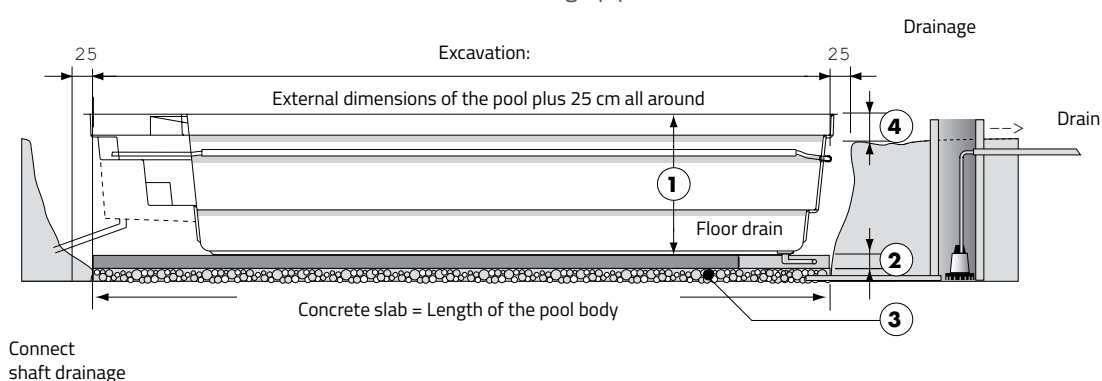

Drainage layer (for groundwater only)

In the event groundwater is suspected to be in the area of installation, it is critical to the longevity, sustainability, and durability of the pool that a drainage layer be created. Groundwater can become pressurized and with no drainage layer to protect the integrity of the pool, the water can push up against the pool and create irreparable damage. If groundwater is suspected, a drainage layer must be established in the area ③ of installation during excavation, complete with a pipe to drain off the groundwater. It should be noted that groundwater is only likely to damage the pool when it has been drained of water, and a full pool is at little to no risk of ground water damage

Dimensions: Over the entire excavation

Thickness: 15 cm

Material: Crushed stone, drainage pipe 100 mm diameter

The exact installation description can be found in our technical information.

Prices

A premium-quality ready-made pool

The pool body is engineered with fiberglass reinforced plastic and an insulated floor constructed from rigid foam polyurethane with GRP coating, while the walls and the pool cover edge for the contain steel reinforcements. The five carefully designed shaped steps on each side of the pool allow users to enter and exit easily, safely, and comfortably.

Transport

Our uniquely designed, special vehicles are equipped with a powerful loading crane that is 13.7 meters long and capable of lifting over 1,000kg.

While it is always possible to unload the pool directly next to our vehicle, we are not always able to do so directly onto the excavation site. In many cases, the excavation site is inaccessible to our vehicle, either due to impassable obstacles or sheer distance, require the use of a local truckmounted crane.

If you believe your excavation site might require extra transportation requirements, please contact our dispatch department to discuss options.

Setting down of the pool with on-board crane on the freely passable property boundary or in the excavation pit, if possible or at the dealer warehouse

FKra001
